# Apply for a student developer pack

As a student, you can apply for the GitHub Student Developer Pack, which includes offers and benefits from GitHub partners.

Before applying for an individual discount, check if your learning community is already partnered with us as a GitHub Campus Program school. For more information, see "[About GitHub Campus Program](#)."

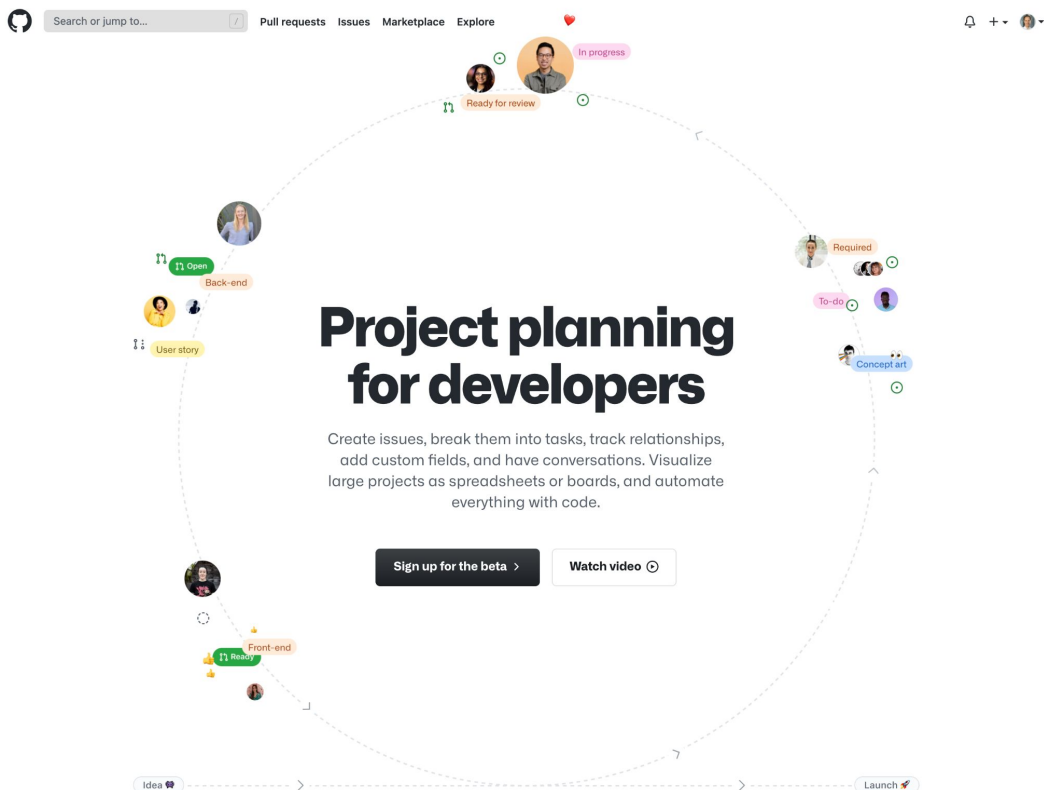

## Requirements

To be eligible for the GitHub Student Developer Pack, you must:

- Be currently enrolled in a degree or diploma granting course of study such as a high school, secondary school, college, university, homeschool, or similar educational institution
- Have a verifiable school-issued email address or upload documents that prove your current student status
- Have a [GitHub user account](#)
- Be at least 13 years old

## About project boards

Project boards on GitHub help you organize and prioritize your work. You can create project boards for specific feature work, comprehensive roadmaps, or even release checklists. With project boards, you have the flexibility to create customized workflows that suit your needs.

Note: Projects (beta), the all-new projects experience, is now available. For more information about projects (beta), see ["About projects \(beta\)."](#)

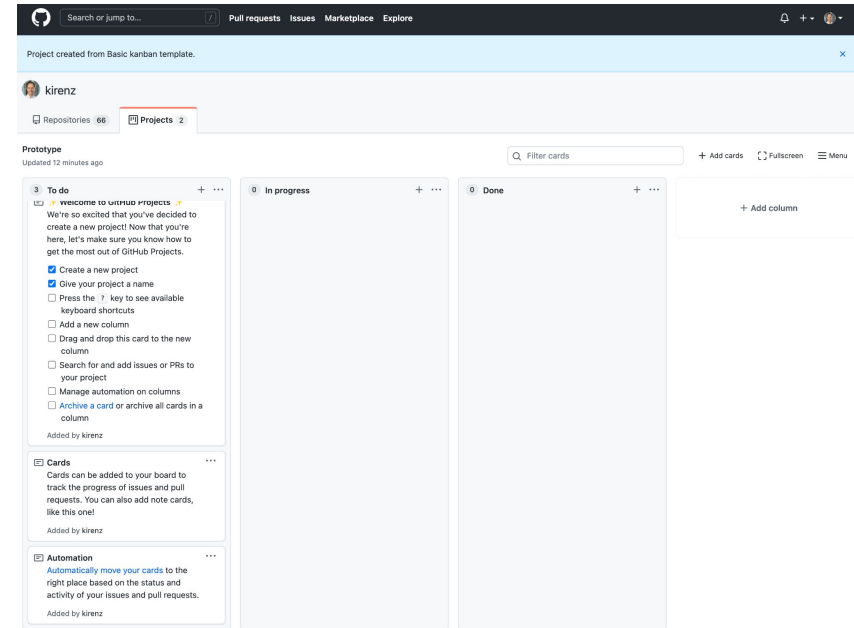

Project boards are made up of issues, pull requests, and notes that are categorized as cards in columns of your choosing. You can drag and drop or use keyboard shortcuts to reorder cards within a column, move cards from column to column, and change the order of columns.

Project board cards contain relevant metadata for issues and pull requests, like labels, assignees, the status, and who opened it. You can view and make lightweight edits to issues and pull requests within your project board by clicking on the issue or pull request's title.

You can create notes within columns to serve as task reminders, references to issues and pull requests from any repository on GitHub, or to add information related to the project board. You can create a reference card for another project board by adding a link to a note. If the note isn't sufficient for your needs, you can convert it to an issue. For more information on converting project board notes to issues, see ["Adding notes to a project board."](#)

# Dokumentation des **Arbeitsprozesses** anhand eines **GitHub Project Boards**

- Für die Dokumentation des Arbeitsprozesses verwenden wir **kontinuierlich** GitHub Project Boards.
- Damit kann das Projekt agil bearbeitet werden.

# Dokumentation der **Arbeitsleistung** mit **GitHub Pages**

- Die Dokumentation umfasst alle wesentlichen Bestandteile der Entwicklung des Prototyps entlang des **Data Science Lifecycles**
- Es soll erkennbar werden, welche Person an welchen Inhalten gearbeitet hat.
- Die Art der Darstellung ist frei wählbar, soll sich jedoch an **wissenschaftlichen Kriterien** (bspw. APA Zitation) orientieren.

# Dokumentation der **Arbeitsleistung** mit **GitHub Pages**

# APA Format Citation Guide

This is a complete guide to APA (American Psychological Association) in-text and reference list citations. This easy-to-use, comprehensive guide makes citing any source easy. Check out our other citation guides on [MLA 8](#) and [Harvard](#) referencing.

## Core Components of an APA Reference:

### Author Rules:

1. Initials are separated and ended by a period eg Mitchell, J A
2. Multiple authors are separated by commas and an ampersand eg Mitchell, J A., Thomson, M., & Coyne, R
3. Multiple authors with the same surname and initial: add their name in square brackets eg Mendeley, J. [James].

### Date Rules:

1. Date refers to date of publishing
2. If the date is unknown 'n.d.' is used in its place eg Mendeley, J.A. (n.d)

### Title Rules:

1. The format of this changes depending on what is being referenced.

Author's surname, initial(s). (Date Published). Title of source. Location of publisher: publisher. Retrieved from URL

### Publisher Rules:

1. If in the US: the city and two letter state code must be stated eg San Francisco, CA
2. If not in the US: the city and country must be stated eg Sydney, Australia

This is used if the source is an online source.
